# COMPANY PROFILE

8/20/2020

PRIVATE & CONFIDENTIAL

# A LEADER OF DIGITAL ENABLEMENT

Being a leader of Digital Enablement means bringing together people, processes and technology in order to deliver quality service to customers.

At Cross Stream, we believe that people are the fundamental drivers of change and that business value should be leveraged of existing human capital and digital power.

We are a proudly South African company that thrives on building strong relationships with our clients so that we can deliver exceptional service that cater directly to their needs.

# WHY CROSS STREAM?

Cross Stream Systems (PTY) LTD is a **proudly South African** ICT Company and a **Level 2, Black Female Owned, Exempt Micro Enterprise (EME)**.

In order to deliver the best and place quality above all, Cross Steam is empowered with a great number of reputable partners and products which all contribute to adding value to our clients.

**OVATIONS**

100% owned and part of the  
Ovations Technologies (Pty) Ltd

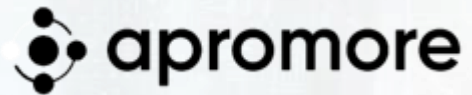

## OUR EXPERTISE

Cross Stream comes with **over 20 years of expertise**. The business challenge solutions we provide, are created from all perspectives possible – ensuring a bulletproof vest for our clients' that adapts to every leap in the evolution of the information technology and business landscape.

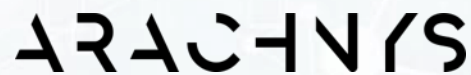

No client takes priority over another, and we are committed to not only meeting their ICT needs as their business grows but driving this growth in every way we can.

We also believe that we have an advantage by being in the technological sphere, the sphere that is growing and has more influence than any other; it is for this reason that we use this podium to demonstrate societal change and the empowerment of all people.

## OUR PARTNERS

Cross Stream partners with leading digital transformation companies to bring cutting-edge solutions to our clients' business challenges.

# VALUE PROPOSITIONS

ENABLING THE  
DIGITAL ENTERPRISE

DRIVING CLOUD  
JOURNEYS

UNLOCKING PROCESS  
AUTOMATION

REALISING VALUE  
FROM CONTENT

IMPLEMENTING  
DATA & ANALYTICS

MITIGATING  
FINANCIAL CRIMES

Under these value propositions, we provide services in relation to:

- Strategy & Roadmaps
- Maturity Assessments
- Modelling & Architectures
- Planning and implementation
- POC/Pilot/Foundation
- Full Implementation

## ENABLING THE DIGITAL ENTERPRISE

The goal of Digital Enablement & Optimisation is to add value to your organisation without changing the business model – this could be in the form of improved customer experience, improved productivity, increased revenue or reduced operational cost. This includes how your organisation responds to digital opportunities that foster customer centricity as well as working closely with our cloud adoption and modern IT architectures team to attain business value.

## DRIVING CLOUD JOURNEYS

IT systems that support business agility have been driving the adoption of modern IT architectures, including microservices and serverless in a Cloud Native approach. Our approach not only has a “security first” approach, but also takes into account many other factors to ensure we implement systems that can realise the benefit of business agility through systems that support your company in adapting to a fast-changing World. Companies have to be agile in today’s highly competitive, and often global markets.

## UNLOCKING PROCESS AUTOMATION

Intelligent Process Automation has enabled various business activities to be automated, expanding your human workforce with a virtual workforce – ensuring accuracy, efficiency, and the ability to achieve long-term strategic goals. IPA creates and improves business value and gives your business the ultimate competitive advantage – by taking your company to an enterprise-wide level. IPA integrates all operations within your company, develops your company’s ability to grow and adapt, and increases efficiency.

## REALISING VALUE FROM CONTENT

There is no point of storing data that has no purpose. Our Content Service (CS) Solutions are principled in integration, bringing together architecture supportive of on-premises and hybrid cloud services, a multi-repository approach to manage content regardless of its source repository, and intelligent functions to analyse and streamline the delivery of your content for more insightful development of operational goals, retention of business knowledge, regulatory management, and process efficiencies.

## IMPLEMENTING DATA & ANALYTICS

Our Data & Analytics integrated approach in combination with all our offerings provides in-depth enterprise insights into the past, present, and possible future of your company, and where the challenges and opportunities lie or may arise. This is an enabler in preventing detrimental situations, continuous improvement and directing focus on opportunities and strengths. Our solutions help business transcend towards enterprise-wide insights enabling a modern data driven decision strategy.

## MITIGATING FINANCIAL CRIMES

We live in an age of financial crime and fraud; so, we work with you, using our skills and knowledge gained through multiple client engagements to support you in your fight against financial crimes. This distrust and lack of confidence are not unwarranted. We cover key areas such as, Know-Your-Customer (KYC), Anti-Money Laundering (AML), and Enhanced Due Diligence (EDD) – all of which ensure insightful, efficient and effective risk decisions about your clients and counterparties.
